It is important to remember that each entry is unique and each task performed within the space presents unique hazards. Before entering this space personnel must ensure that they will not create additional hazards by the type of work they are performing or chemicals that they will be using (i.e. welding, painting, cleaning with chemicals, etc.) The tasks and materials that are brought into the space must be carefully evaluated to ensure that additional hazards are not created and where necessary additional PPE is selected and proper precautions are taken.
